

Nielsen Heuristic Evaluation - Personalized Study Planner

To assess the quality of our user interface, we conducted a heuristic evaluation based on Nielsen's 10 Usability Heuristics. Two team members reviewed all major screens of the application, identifying 13 usability issues ranging from cosmetic to major severity. The findings were used to guide UI improvements before final delivery.

No	Heuristic	Description of the Issue	Screenshot	Seve rity	Suggested Improvement
1	H1-1: Simple & natural dialog	Some UI sections (e.g., dashboard cards and filters) feel slightly cluttered and not optimally organized for first-time users.		1	Simplify layout by grouping related elements and reducing unnecessary visual elements.
2	H1-2: Match between system and real world	The event types (Class, Exam, Other) are too generic and may not reflect real study situations.		1	Use more meaningful labels such as "Study session", "Deadline", etc.
3	H1-3: Minimize users' memory load	When there are no tasks, the dashboard only shows "No tasks yet..." without guiding users on what to do next.		2	Add a clear CTA button such as "Create your first task".
4	H1-3: Minimize users' memory load	The calendar does not display weekday labels (Mon, Tue, etc.), making it harder to interpret dates.		2	Add a row showing the days of the week.
5	H1-4: Consistency and standards	There are two ways to create tasks (" + New Task" and AI button), but the AI button has no label, which may confuse users.		2	Add a tooltip or label such as "AI Task Generator".

6	H1-4: Consistency and standards	In the Profile page, both "Name" and "First Name / Last Name" fields are present, causing redundancy.		2	Use either full name or separated fields, not both.
7	H1-5: Feedback	After adding an event, there is no confirmation message indicating success.		1	Display a toast message such as "Event added successfully".
No	Heuristic	Description of the Issue	Screenshot	Seve rity	Suggested Improvement
8	H1-5: Feedback	After clicking "Save" in the Profile page, there is no clear indication whether the changes were saved successfully.		2	Add a success or error message after saving changes.
9	H1-6: Clearly marked exits	The modal includes a Close button but does not have a standard "X" icon at the top-right corner.		1	Add a close (X) icon at the top-right corner.
10	H1-7: Shortcuts	The system does not provide shortcuts or quick actions (e.g., keyboard shortcuts or quick-add features) for experienced users.		1	Add quick actions such as "Quick Add Task" or keyboard shortcuts for faster interaction.
11	H1-8: Precise & constructive error messages	Error messages (e.g., JSON/CORS errors) are technical and not user-friendly, making it hard for users to understand what went wrong.		2	Replace technical error messages with clear, user-friendly messages such as "Sign up failed, please try again".
12	H1-9: Prevent errors	The event creation form does not clearly indicate required fields, which may lead to incomplete submissions.		3	Mark required fields and add validation before submission.

13	H1-10: Help and documentation	The AI input field asks "What do you want to learn?" but does not provide any example input.		2	Add a placeholder example such as "e.g., Learn Java in 2 weeks".
